Mata Kuliah Basis Data

NIM : 103122400059
Nama : Andhika Fikri Ekanatha

Kelas: SE-08-02

PROGRAM STUDI S1 SOFTWARE ENGINEERING

TELKOM UNIVERSITY PURWOKERTO

APRIL 2026

MODUL 8 JURNAL

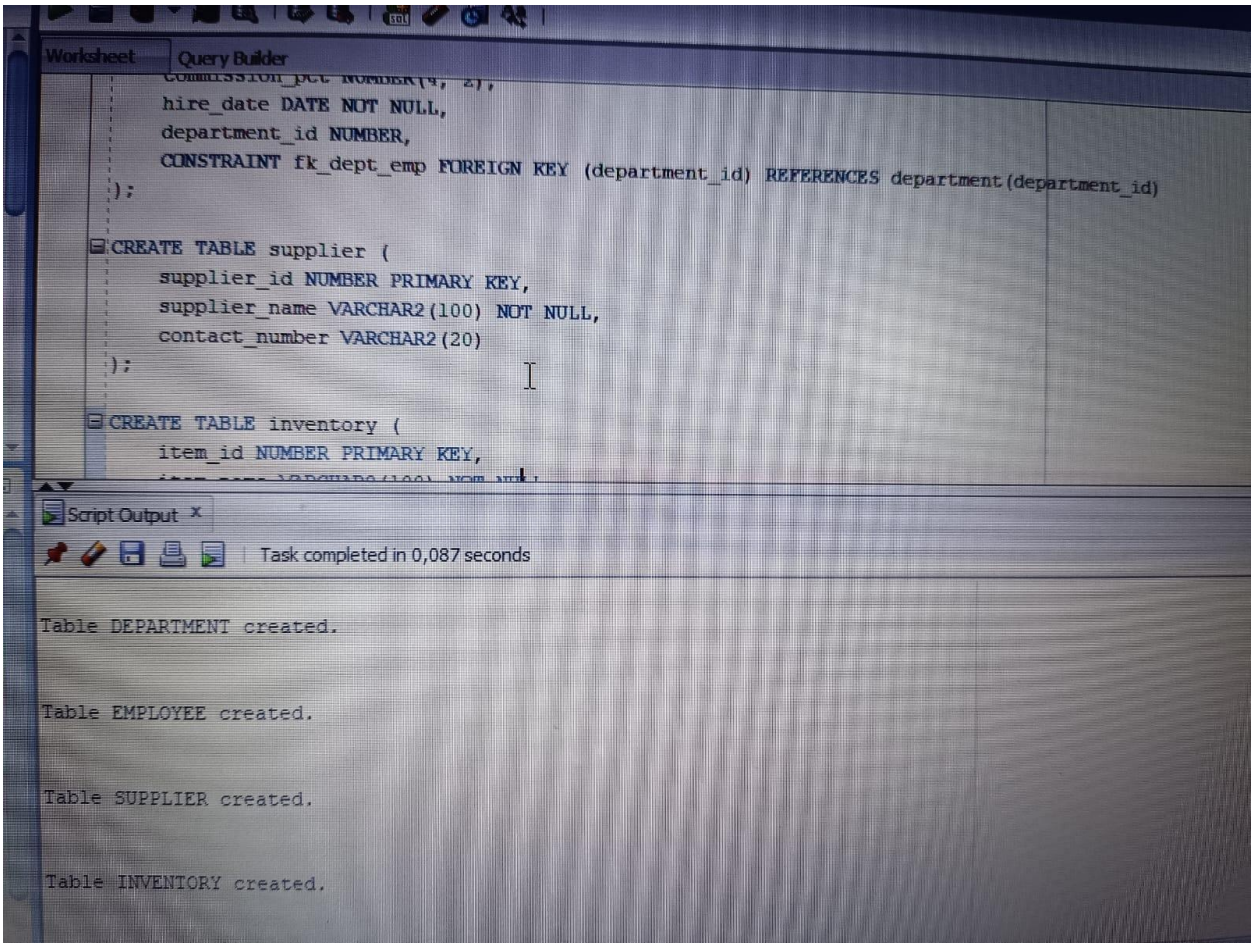
Kerjakan studi kasus pada modul 8 (halaman 87). Sertakan rekaman layar untuk setiap nomor.

8.2 Studi Kasus

1. Buatlah desain database untuk suatu perusahaan: a. Table department dengan primary key adalah department_id. Tabel departemen terdiri atas field-field: department_id, department_name, manager_id, dan location_id. b. Table employee dengan constraint foreign key adalah department_id. Tabel employee terdiri atas field-field: employee_id, last_name NOT NULL, email, salary, commission_pct, hire_date NOT NULL. c. Tambahkan tabel-tabel lain yang saling berelasi (seperti: tabel persediaan barang, pemasok barang, dst).
2. Analisis table-table dengan compute statistics.
3. Isikan data-data yang bersesuaian dengan tabel-tabel pada nomor 1 (masing-masing 10 record).

4. Analisis table-table dengan compute statistics.
5. Buat view empvu80 yang berisi id_number, name, salary, department_id dari pegawai yang bekerja di department = 80.
6. Kemudian tampilkan struktur dari view empvu80.
7. Buat non-unique index pada kolom FOREIGN KEY yang ada pada tabel EMPLOYEE

Create Table



```
    salary,
    department_id
FROM employee
WHERE department_id = 80;

DESCRIBE empvu80;

CREATE INDEX emp_department_ix ON employee(department_id);

SELECT * FROM department;

SELECT * FROM employee;
```

Script Output × | Query Result ×
